**Dear colleagues!**

On February 24, 2022, the Russian Federation invaded the state borders of a sovereign state and for a week strikes at the objects of the critical infrastructure and civilians. More than two dozen children and hundreds of adults have already died. This is an audacious, unheard of and unprecedented step towards the revision of the world order on the part of a subject who imagines himself the arbiter of fate and the supreme ruler of the world. There is a real threat to the system of deterrence and counterweights not only in Europe, but throughout the world.

The forensic community has always stood on the principles of truth, objectivity and independence. For an expert, truth is not an empty phrase, but the essence and global goal of expert activity.

Condemnation of the aggression of the Russian Federation and comprehensive support for Ukraine in this senseless and cruel war, expressed more than 50 countries from all continents, 1200 organizations - international, governmental and non-governmental, including the European Union and NATO. All of them not only condemned Russia's actions, but also provided unprecedented organizational, military and humanitarian assistance.

Colleagues! Now is not the time for neutrality. It is important for us to understand and feel your support!

We call on you to openly condemn the actions of the Russian Federation from the community of forensic experts of your state. In conditions of martial law, any of your help will be in demand.

The Union of Experts of Ukraine is ready to act as an organizer of the transfer of humanitarian cargo, the solution of refugee issues, coordination and organizational work.
